Education

Manipal Institute of Technology

B.Tech in Computer Science (Artificial Intelligence)

Bangalore, Karnataka

July 2023 – Present

Delhi Public School Bangalore East

Grade XII, CBSE

Bangalore, Karnataka

June 2021 – March 2023

Ryan International School, Bangalore

Grade X, ICSE

Bangalore, Karnataka

Sept 2018 – Feb 2021

Technical Skills

Languages: Python, Java **Web:** HTML, CSS, JavaScript **Tools & Platforms:** Git, Docker, Power BI, Power Query

Frameworks & Libraries: Scikit-learn, PyTorch, NumPy, Pandas, FastAPI, Sentence Transformers, BM25, CrossEncoder

Databases & Infrastructure: MySQL, Qdrant **Concepts:** Data Structures & Algorithms, OOP, REST APIs, RAG Pipelines, Computer Vision, NLP

Professional Experience

Intern – AI Cost Governance & FinOps

Persistent Systems, Bengaluru, India

June 2026 – Present

- Building an AI Cost Governance Dashboard (Power BI / Power Query) to track token, credit, and spend consumption across enterprise AI tools including GitHub Copilot, Cursor, Claude, and ChatGPT.
- Designing hierarchical drill-down views across Organizational Unit (OU), Business Unit (BU), and Delivery Unit (DU) levels by parsing and transforming nested, multi-sheet Excel data sources into BU-filtered Power Query models.
- Working with stakeholders to move the project from an approved Proof-of-Concept into an automated, production-ready reporting pipeline, improving consistency and reducing manual effort in cost-tracking workflows.

Intern – Computer Networking & AI-Based Surveillance

Tyax Pvt. Ltd., Colombo, Sri Lanka

June 2025 – July 2025

- Assisted in configuring and monitoring enterprise-grade network infrastructure; gained hands-on exposure to VLAN setup, network security protocols, and real-time system monitoring dashboards.
- Supported deployment and operational testing of AI-powered surveillance and analytics systems, documenting findings and flagging anomalies to senior engineers.
- Delivered clear technical documentation and status reports in a cross-cultural, fast-paced professional environment — strengthening communication and engineering collaboration skills.

Projects

LoreMind – Hybrid RAG System : Python | FastAPI | Qdrant | Ollama | Sentence Transformers | BM25 | Docker

- An AI-powered Q&A assistant for Star Wars lore — users ask natural language questions and receive accurate, context-grounded answers from a curated knowledge base, without manually searching wikis or forums.
- Engineered a hybrid retrieval pipeline combining dense vector search (Sentence Transformers + Qdrant) with sparse BM25, then applied CrossEncoder reranking to further refine results before LLM context injection.
- Built a RESTful FastAPI backend with a cinematic animated frontend, delivering real-time streamed responses end-to-end from query to rendered output.

Code Style Attribution Engine : Python | FastAPI | MLPClassifier | AST Analysis | Scikit-learn | Tailwind CSS

- A code authorship tool that lets users paste any anonymous Python snippet and instantly identifies its likely author — useful for academic integrity checks and forensic analysis — with no runtime execution required.
- Built a hybrid feature pipeline extracting AST-derived structural metrics (cyclomatic complexity, loop/branch density, nesting depth) alongside character-level n-gram stylometrics across a curated multi-author dataset.
- Trained an MLPClassifier achieving confident top-3 author predictions with probability scores; served via a /analyze REST endpoint with sub-second inference latency.

Certificates

- Machine Learning with Python** – IBM / Coursera (*In Progress*): Supervised/unsupervised models in Scikit-learn; preprocessing, feature engineering, model evaluation.
- Data Structures & Algorithms Specialization** – University of Illinois / Coursera (2024): Arrays, linked lists, trees, graphs; greedy, DP, divide-and-conquer, BFS/DFS.
- Object-Oriented Programming in Java** – University of Pennsylvania / Coursera (2024): Encapsulation, inheritance, polymorphism, abstraction, OOD principles.
- Coding Interview Preparation** – Meta / Coursera (2025): Arrays, strings, trees, graphs via backtracking, memoization, sliding window, two-pointer techniques.
